Department of Computer Science and Engineering - 3

AY: 2025-2026

Department of Computer Science and Engineering - 3

CERTIFICATE

Certified that the project work entitled "**Music Streaming Website UI**" was carried out by **Ms. Student name (1NZ24CS107)**, a Bonafide student of New Horizon College of Engineering in partial fulfilment for the award of **Bachelor of Engineering in Computer Science and Engineering** of the Visvesvaraya Technological University, Belagavi during the year 2025-26. It is certified that all corrections/suggestions indicated for Internal Assessment have been incorporated in the Report deposited in the Departmental library. The project report has been approved as it satisfies the academic requirements in respect of the project work prescribed for the Bachelor of Engineering Degree.

ABSTRACT

The Vinyl Music Streaming Platform is a UI/UX based web application developed using HTML, CSS, and JavaScript to provide users with an interactive and visually appealing music streaming experience. The project focuses on designing a modern and user-friendly interface that simulates the core features of a real-world music streaming application.

The application consists of multiple pages including a welcome page, login page, signup page, and a music player interface. The interface includes features such as playlist management, music controls, progress tracking, search functionality, and responsive navigation components. The project emphasizes aesthetic design principles, smooth user interaction, and effective layout structuring.

The user interface was initially designed using Figma to create a consistent visual style and prototype workflow before implementation. CSS was used extensively for styling, animations, responsive layouts, and modern visual effects, while JavaScript was used to implement interactive functionalities such as play/pause controls, playlist selection, progress bar updates, and dynamic user interactions.

This project demonstrates the practical implementation of UI/UX design concepts along with frontend web development technologies. It highlights the importance of usability, accessibility, responsiveness, and user-centered design in creating engaging digital applications.

1. INTRODUCTION ABOUT UI/UX DESIGN

User Interface (UI) and User Experience (UX) design are important aspects of modern web and application development. UI design focuses on the visual appearance of an application, including layouts, typography, colors, buttons, icons, and interactive components. UX design focuses on improving user satisfaction by creating systems that are easy to use, efficient, accessible, and enjoyable.

In today's digital world, users expect applications to be visually attractive, responsive, and intuitive. Music streaming platforms especially require smooth navigation and engaging interfaces because users interact continuously with playlists, albums, songs, and playback controls. Therefore, effective UI/UX design plays a major role in improving the overall user experience.

The Vinyl Music Streaming Platform was developed as a frontend UI/UX project to demonstrate the implementation of modern web design principles using HTML, CSS, and JavaScript. The project includes multiple webpages such as the landing page, login page, signup page, and a music player dashboard. Each page was designed with consistency in color palette, typography, spacing, and interactive elements to provide a seamless user experience.

The project workflow began with wireframing and interface prototyping using Figma. The designed layouts were then converted into functional webpages using HTML for structure, CSS for styling and animations, and JavaScript for implementing interactive features. The application includes functionalities such as playlist creation, music controls, search interaction, navigation elements, progress tracking, and dynamic UI updates.

The main objective of this project is to understand the principles of UI/UX design and apply frontend development technologies to create a visually appealing and interactive web application. The project also helps in improving practical skills in responsive design, interface consistency, animation handling, and event-driven programming.

The Vinyl platform demonstrates how thoughtful UI/UX design can improve usability and engagement while creating a professional and modern web application experience.

3. FIGMA PROJECT

3.1 Figma steps

1. Open Figma and create a new design file for the Vinyl Music Streaming Platform.
2. Create desktop frames using the Frame Tool (F) with suitable dimensions for all application pages.
3. Design the Welcome Page containing:
 - o Vinyl-style animated logo
 - o Welcome heading: "WELCOME TO VYNYL!"
 - o Subtitle text
 - o Login button
 - o Signup navigation link
4. Apply a dark-themed background using shades of black and gray for a modern music streaming appearance.
5. Add typography using Google Fonts such as:
 - o Bebas Neue for headings
 - o DM Sans for body text and buttons
6. Design the Login Page using:
 - o Email input field
 - o Password input field
 - o Login button
 - o Forgot password link
 - o Navigation links to signup and home page
7. Design the Signup Page containing:
 - o Email address input field
 - o Next button
 - o Phone number signup button
 - o Login navigation link
8. Create the Music Player Dashboard frame with:
 - o Sidebar navigation
 - o Playlist section
 - o Search bar
 - o Recently played section
 - o Recommended music section
 - o Playback controls

9. Design playlist cards using:
 - o Rounded rectangles
 - o Music thumbnails/emojis
 - o Playlist titles
 - o Hover effect styling
10. Add playback control components including:
 - o Play/Pause button
 - o Next/Previous buttons
 - o Progress bar
 - o Volume control slider
11. Create a Lyrics Panel section with:
 - o Album artwork placeholder
 - o Track title and artist name
 - o Lyrics display container
12. Use Auto Layout to maintain consistent spacing, alignment, and responsiveness between UI components.
13. Add modern UI styling such as:
 - o Rounded corners
 - o Shadows and hover effects
 - o Smooth transitions and animations
14. Create interactive prototype links between:
 - o Welcome page
 - o Login page
 - o Signup page
 - o Music player dashboard
15. Apply a consistent color palette throughout the design using:
 - o Dark gray and black backgrounds
 - o Teal accent colors
 - o White and muted gray text colors
16. Use constraints and responsive alignment techniques to ensure proper layout adaptation across screen sizes.
17. Preview the prototype using the Present option in Figma to test navigation flow and UI interactions.
18. Export the final frames and screenshots as PNG/JPG files for project documentation and frontend implementation.

These steps were implemented for the Vynyl Music Streaming Platform UI/UX project.

3.2 FIGMA OUTPUT

4. OUTCOME, APPLICATIONS & BENEFITS

4.1 Outcome of the Project

The Vinyl Music Streaming Platform was successfully designed and developed as a frontend UI/UX web application using HTML, CSS, JavaScript, and Figma. The project achieved the objective of creating a modern, visually appealing, and interactive music streaming interface that simulates the functionality of a real-world streaming platform.

The final application includes multiple webpages such as:

- Welcome page
- Login page
- Signup page
- Music player dashboard

The project successfully demonstrates various frontend development concepts including:

- Responsive web design
- UI component structuring
- Interactive user interfaces
- Navigation handling
- Dynamic playlist management
- Progress bar functionality
- Music playback simulation
- Search interaction

The use of Figma during the design phase helped in creating a consistent and professional UI before implementation. The completed project improved understanding of UI/UX principles, frontend technologies, layout management, and event-driven programming.

4.2 Applications of the Project

The Vinyl Music Streaming Platform can be applied in various real-world scenarios related to music streaming and entertainment applications.

Applications include:

- Online music streaming platforms
- Podcast and audio streaming services
- Media player interfaces
- Entertainment dashboard applications
- UI/UX prototyping projects
- Frontend web development learning projects

- Digital media management systems
 - Responsive web application design practice
- The project can also serve as a foundation for advanced applications by integrating:
- Backend databases
 - User authentication systems
 - Real-time audio streaming
 - Recommendation systems
 - AI-based music suggestions
 - Cloud storage and playlist synchronization

4.3 Benefits of the Project

The Vinyl Music Streaming Platform provides several technical and practical benefits.

Technical Benefits

- Improves understanding of HTML, CSS, and JavaScript
- Demonstrates implementation of responsive UI design
- Enhances knowledge of frontend development concepts
- Provides experience in event handling and DOM manipulation
- Develops skills in layout structuring and component organization

UI/UX Benefits

- Improves user interaction and navigation experience
- Demonstrates modern dark-theme interface design
- Maintains visual consistency across webpages
- Uses animations and transitions for better engagement
- Creates an intuitive and user-friendly interface

Educational Benefits

- Helps students understand the complete UI/UX workflow
- Provides practical exposure to Figma prototyping
- Bridges the gap between design and implementation
- Encourages creativity in interface development
- Improves problem-solving and frontend development skills

Future Scope

The project can be further enhanced by adding:

- Real audio streaming support
- Backend integration
- Database connectivity
- User profile management
- Music recommendation algorithms
- Mobile responsive optimization
- API integration for songs and lyrics
- Advanced playlist customization

The project demonstrates how effective UI/UX design combined with frontend technologies can create engaging and professional web applications for modern digital platforms.
